TAILORED FOR NEAR

Esteban Garzon

Automation Engineer | n8n, APIs, AI Workflows, and Systems Architecture

Quito, Ecuador | Remote for U.S. teams | English and Spanish | Self-directed builder focused on automation systems, data architecture, and AI-enabled internal tools for fast-moving operations

PORTFOLIO AND WORK SAMPLES

estebangarzon.com

Selected projects, automation systems, reporting workflows, AI-enabled tooling, and technical samples live here. It gives additional context on how I build systems that reduce friction and scale operations.

PROFESSIONAL SUMMARY

Automation engineer and systems builder with hands-on experience designing workflows, structuring data, integrating operational systems, and deploying automation across real business environments. My recent work has involved connecting APIs, shaping messy operational data into reliable pipelines, building internal tools, and using automation-first thinking to eliminate manual bottlenecks across operations, production, logistics, and finance-related workflows. I am comfortable taking projects from vague concept to deployed solution, balancing systems architecture with implementation detail, and documenting what I build so teams can use it reliably. For deeper project detail and technical work samples, please visit **estebangarzon.com**.

Automation Engineering
Hands-on work building workflow automations, scripting logic, integrations, and internal systems that reduce manual work and improve execution speed.

Systems Architecture
Strong at mapping data flow, structuring relational logic, and designing scalable systems that connect tools, people, and business processes.

AI Workflows And Agentic Logic
Experience using AI-enabled workflows, prompt-aware systems, and automation-first problem solving to reduce decision overhead and increase operational leverage.

Execution Style
Self-directed, fast-moving, and comfortable owning automation projects from discovery through deployment with minimal oversight.

RELEVANT EXPERIENCE

Data Engineer | Automation, Integrations, and Internal Systems Lead

2024 - PRESENT

Remote from Ecuador for a U.S.-based client (Ecuassist) | Cross-functional work spanning automation, APIs, reporting, internal tools, and systems design

- Designed and built end-to-end automated workflows across reporting, operations, production, and finance-adjacent processes using Python, APIs, database logic, and automation-first architecture.
- Connected systems such as SQL Server, PostgreSQL, Excel-based logs, RFMS, Moraware, Slabsmith, Samsara, Microsoft Graph, and other operational sources into reliable data flows.
- Built n8n-style and Zapier-style automation logic, scheduled jobs, API integrations, and event-driven processes to eliminate manual work and improve data freshness.
- Structured messy operational data into queryable models and analytics-ready tables that supported reporting, internal tools, and business process automation.
- Created internal tooling and workflow layers that improved visibility, reduced coordination overhead, and made execution more scalable for distributed teams.
- Worked from vague business pain points to deployed technical solutions, gathering requirements directly from stakeholders and translating them into systems design.
- Documented workflows, logic, and implementation assumptions in English so systems could be maintained and extended over time.

Data Analyst, Financial Modeling, and Project Support Roles

2022 - 2023

Gringconstruc and Universidad San Francisco de Quito | Energy, construction, and public infrastructure projects

- Organized complex project inputs, structured data, and built analytical outputs that supported planning, feasibility, and operational decision-making.
- Developed strong discipline for translating ambiguous business and technical inputs into structured models, assumptions, and actionable outputs.
- Built comfort working across technical and business contexts, which now supports my ability to gather requirements and design useful automation systems.

SELECTED AUTOMATION AND SYSTEMS EVIDENCE

Workflow Automation Across Operational Systems

PORTFOLIO

Examples of turning operational pain points into automated workflows, clean data movement, and repeatable system behavior

---

Cross-System API And Data Integration

PORTFOLIO

Work that required connecting multiple systems through APIs, authentication flows, database design, and reliable operational logic

---

AI-Enabled Internal Tooling And Structured Data

PORTFOLIO

Work samples that show prompt-aware workflows, internal tool thinking, structured data design, and implementation discipline

> More project detail, automation systems, AI workflows, internal tools, and technical samples are available at **estebangarzon.com**. It provides additional evidence of how I approach systems architecture, automation engineering, and operational tooling.

TAILORED FOR: AUTOMATION ENGINEER AT NEAR | MARCH 2026

Role Match

Automation engineering · Systems architecture · API integrations · n8n / Zapier workflows · Data structuring · Serverless mindset · AI workflows · Stakeholder translation

Core Tools

JavaScript · Python · Zapier · n8n · REST APIs · Webhooks · SQL · PostgreSQL · SQL Server · Microsoft Graph · Prompt-aware workflows · Internal tools · Data modeling · Documentation

Nice-To-Have Alignment

Next.js | React | Node.js mindset | Monitoring | Cron / scheduling | Deployment scripts

Why This Fits

Vague idea to deployed system

I am used to starting from incomplete pain points, structuring the problem myself, and shipping working systems without waiting for heavy supervision.

Strong systems thinking

I naturally think in terms of flows, dependencies, schemas, automation layers, and how tools connect into one coherent operating system.

Automation and AI leverage

I already build automation-first workflows and AI-enabled systems, so the mix of APIs, structured data, and prompt-aware logic is a strong fit.

Education

Master's in Data Science and Business Intelligence
Universidad de las Americas | 2025 - 2026

Civil Engineering
Universidad San Francisco de Quito | 2018 - 2023

Languages

English: professional working proficiency

Spanish: native

Selected Courses

Foundations of Data Science | Google

Get Started with Python | Google
