TAILORED FOR OPERATIONS / SYSTEMS ARCHITECT LEAD

Esteban Garzon

Operations / Systems Architect Lead | Process Design, Automation, and Internal Systems

Quito, Ecuador | Remote for U.S. teams | English and Spanish | Builder-operator focused on designing scalable internal systems, automation, and process architecture for fast-moving teams

PORTFOLIO AND WORK SAMPLES

estebangarzon.com

Selected projects, internal tooling, automation systems, reporting workflows, and technical samples live here. It gives additional context on how I turn operational complexity into reliable execution.

Email: estebandre2@hotmail.es **Phone:** +593 99 678 8376 **LinkedIn:** linkedin.com/in/esteban-garzon2 **Portfolio:** estebangarzon.com

PROFESSIONAL SUMMARY

Operations-minded systems builder with hands-on experience designing workflows, structuring internal data, automating repetitive processes, and creating reporting visibility for U.S.-based operations. My recent work has involved translating messy operational realities into cleaner systems using reporting layers, internal tools, automation logic, documentation, and cross-platform integration. I am comfortable mapping end-to-end processes, identifying bottlenecks, creating structured operating logic, and implementing scalable solutions across operations, production, logistics, and business support workflows. For deeper project detail and technical work samples, please visit **estebangarzon.com**.

Process Design And Systems Thinking
Experience mapping workflows, identifying bottlenecks, and designing cleaner operational systems that reduce friction and improve visibility.

Internal Tools And Relational Logic
Strong comfort with structured operational data, database-style thinking, and internal systems that connect people, work stages, and decision-making.

Automation And Workflow Orchestration
Hands-on experience with automation-first problem solving using Python, APIs, Zapier, n8n-style workflows, scheduling, and integration logic.

Execution Style
Builder mindset with strong documentation habits, attention to detail, and the ability to turn scattered operational inputs into cohesive systems.

RELEVANT EXPERIENCE

Data Engineer | Internal Systems, Automation, and Operations Architecture

2024 - PRESENT

Remote from Ecuador for a U.S.-based client (Ecuassist) | Cross-functional work spanning internal systems, automation, reporting, and operations design

- Turned scattered requests, spreadsheets, tools, and operational pain points into structured workflows, automation logic, dashboards, and internal systems.
- Designed and maintained data and process flows across SQL Server, PostgreSQL, Excel-based logs, RFMS, Moraware, Slabsmith, Samsara, and other operational systems.
- Built automation-first workflows using Python, APIs, scheduling, Zapier, n8n-style logic, and database integrations to reduce manual work and improve reliability.
- Mapped process bottlenecks across production, logistics, and business operations, then created clearer system design and visibility layers to improve execution.
- Documented workflows, business rules, technical assumptions, and operational usage guidance in English to support implementation and team adoption.
- Built internal tooling and reporting structures that increased accountability, reduced coordination overhead, and created cleaner execution paths for the team.
- Worked comfortably between technical implementation and operational judgment, deciding when to automate, when to document, and when to redesign the process itself.

Data Analyst, Financial Modeling, and Project Support Roles

2022 - 2023

Gringconstruc and Universidad San Francisco de Quito | Energy, construction, and public infrastructure projects

- Organized project inputs, structured business data, and produced analytical models that supported planning, feasibility, and operational decision-making.
- Developed discipline for documenting assumptions, comparing scenarios, and turning complex information into actionable outputs for stakeholders.
- Strengthened process thinking and execution support skills by working across multidisciplinary projects with technical, financial, and operational variables.

SELECTED OPERATIONS AND SYSTEMS EVIDENCE

Operational Workflow Structuring

PORTFOLIO

Examples of turning operational requests into structured workflows, documented logic, and repeatable systems that support execution

---

Cross-System Automation And Integration

PORTFOLIO

Work that required connecting multiple systems, reducing manual steps, and creating more reliable operational flow across tools

---

Documentation And Scalable Internal Logic

PORTFOLIO

Work samples that show structured documentation, internal logic design, and the ability to create systems that others can use reliably

> More project detail, automation systems, internal tools, and technical samples are available at **estebangarzon.com**. It provides additional evidence of how I approach process improvement, systems design, automation, and internal operational structure.

TAILORED FOR: OPERATIONS / SYSTEMS ARCHITECT LEAD | MARCH 2026

Role Match

Process design | Systems architecture | Internal workflows | Operational automation | Relational logic | Documentation | Cross-functional implementation | Builder mindset

Core Tools

Notion-style systems thinking | Airtable-style relational logic | Zapier | n8n | Python | Excel | SQL | APIs | PostgreSQL | SQL Server | Process mapping | Documentation | Data validation | Workflow design

Why This Fits

Messy-to-structured operating style

I regularly work from incomplete, scattered operational inputs and turn them into cleaner workflows, systems, and documentation.

Automation-first problem solving

I instinctively look for ways to reduce manual work, connect disconnected tools, and create reliable operating systems that scale better.

Documentation and implementation discipline

I care not just about designing better processes, but also about documenting them clearly enough that teams can actually use them consistently.

Education

Master's in Data Science and Business Intelligence
Universidad de las Americas | 2025 - 2026

Civil Engineering
Universidad San Francisco de Quito | 2018 - 2023

Languages

English: professional working proficiency

Spanish: native

Selected Courses

Foundations of Data Science | Google

Get Started with Python | Google
