PROFESSIONAL SUMMARY

Business systems and data analyst with experience gathering stakeholder needs, documenting workflows, validating outputs, troubleshooting operational issues, and coordinating delivery of reporting and process improvements. My recent work has involved translating high-level business requests into dashboards, internal tools, process documentation, and system changes across operations, finance, logistics, and production environments. I am comfortable working between business users and technical systems, clarifying requirements, organizing deliverables, supporting testing and validation, and documenting logic in a way that makes solutions easier to adopt. For deeper project detail and technical work samples, please visit **estebangarzon.com**.

Requirements And Documentation
Experience turning business requests into documented workflows, reporting definitions, implementation notes, and stakeholder-friendly deliverables.

Business And Systems Analysis
Hands-on work across data, systems, operations, and reporting with the ability to trace issues across processes, users, and technical platforms.

Testing And Validation Support
Used validation checks, output reviews, and user feedback loops to confirm changes worked correctly before wider adoption.

Execution Style
Organized, self-sufficient, and comfortable coordinating work from concept through implementation while keeping stakeholders informed.

RELEVANT EXPERIENCE

Data Engineer | Systems, Process, and Reporting Analyst

2024 - PRESENT

Remote from Ecuador for a U.S.-based client (Ecuassist) | Cross-functional work spanning business requests, internal systems, reporting, and process improvements

- Gathered high-level reporting and workflow requirements from managers and operational stakeholders, then translated them into dashboards, automation steps, internal tools, and documented business logic.
- Documented process flows, report definitions, technical assumptions, and usage guidance in English to support implementation, handoff, and day-to-day business adoption.
- Analyzed issues across systems, software, and processes by tracing root causes through ERP-style platforms, spreadsheets, APIs, SQL databases, and user workflows.
- Coordinated changes from concept through implementation, aligning stakeholder priorities, validating outputs with users, and iterating based on feedback.
- Supported testing and verification through data quality checks, validation logic, controlled updates, and stakeholder review of outputs before broader use.
- Built user-facing tools and reporting interfaces that improved visibility, reduced manual work, and increased user satisfaction with internal processes.
- Worked with Microsoft-oriented services, Office-based workflows, and documentation-heavy processes common in business operations environments.

Data Analyst, Financial Modeling, and Project Support Roles

2022 - 2023

Gringconstruc and Universidad San Francisco de Quito | Energy, construction, and public infrastructure projects

- Gathered project inputs from technical and business stakeholders, organized requirements, and converted them into analytical models, feasibility studies, and decision-support documentation.
- Produced structured analyses for investment, operations, and planning decisions, including forecasts, cost-benefit evaluations, and scenario comparisons.
- Strengthened project coordination, written communication, and business-facing presentation skills by supporting multidisciplinary initiatives with clear deliverables and timelines.

SELECTED BUSINESS AND SYSTEMS EVIDENCE

Requirements To Reporting Delivery

PORTFOLIO

Examples of translating operational requests into structured reporting, documented logic, and repeatable business workflows

System Troubleshooting And Cross-Platform Analysis

PORTFOLIO

Work that required tracing issues and inconsistencies across multiple systems, users, datasets, and process handoffs

Documentation And Implementation Support

PORTFOLIO

Public work samples that show structured documentation, system understanding, and the ability to support technical implementation with business clarity

> More project detail, system examples, and technical samples are available at **estebangarzon.com**. It provides additional evidence of how I approach systems thinking, process improvement, reporting, and implementation support.

TAILORED FOR: BUSINESS SYSTEMS ANALYST OPPORTUNITY SOURCED BY PINNACLE METHOD CONSULTING | MARCH 2026

Role Match

Requirements gathering · Business analysis · Process documentation · Systems analysis · User validation · Troubleshooting · Project coordination · Stakeholder communication

Core Tools

Microsoft Office · Excel · Power BI · SQL · Python · Process mapping · Documentation · Data validation · Testing support · PostgreSQL · SQL Server · REST APIs · Issue analysis

Why This Fits

Business-to-technical translation

I regularly work from incomplete business requests, clarify what users need, and turn those needs into concrete system, reporting, or process deliverables.

Documentation and validation mindset

I am comfortable documenting requirements, logic, workflows, and results in ways that support testing, implementation, and user adoption.

Transferable to healthcare operations

My background is strongest in process-heavy operational environments, which transfers well to structured, stakeholder-driven organizations such as healthcare services.

Education

Master's in Data Science and Business Intelligence
Universidad de las Americas | 2025 - 2026

Civil Engineering
Universidad San Francisco de Quito | 2018 - 2023

Languages

English: professional working proficiency

Spanish: native
