TAILORED FOR SISKON SOFTWARE & AUTOMATION

Esteban Garzon

Senior Power BI Developer | DAX, Data Modeling, KPI Dashboards, and BI Performance

Quito, Ecuador | Remote for international teams | English and Spanish | Senior BI practitioner focused on Power BI development, SQL-based analytics, and scalable reporting solutions

PROFESSIONAL SUMMARY

Senior Power BI developer with hands-on experience designing and maintaining KPI-driven reporting ecosystems for U.S.-based operations. My recent work centers on Power BI dashboards, SQL-driven reporting, data shaping, semantic-model thinking, and multi-source analytics workflows that improve visibility and decision-making across operations, production, logistics, and finance. I am comfortable translating business questions into scalable reporting solutions, building clear dashboards, and shaping data from SQL Server, PostgreSQL, spreadsheets, APIs, and operational systems into analytics-ready models. For deeper project detail and public code samples, please visit **estebangarzon.com**.

Advanced Power BI Delivery
Power BI dashboards, KPI storytelling, drill-focused analysis, data shaping, and interactive reporting for operational and financial workflows.

Data Modeling And SQL
Strong hands-on work across SQL Server, PostgreSQL, spreadsheet ingestion, APIs, and analytics-ready transformations that support clean reporting models.

Governance And Validation
Used validation checks, structured naming, documentation, access control, and reliable refresh logic to keep reporting trustworthy and maintainable.

Execution Style
Self-sufficient, collaborative, and comfortable translating business requirements into scalable Power BI solutions with clear business value.

RELEVANT EXPERIENCE

Data Engineer | Power BI, Reporting, and Analytics Systems Lead

2024 - PRESENT

Remote from Ecuador for a U.S.-based client (Ecuassist) | End-to-end BI work across reporting, SQL, automation, and operational analytics

- Built and maintained an end-to-end reporting ecosystem using Power BI, SQL, PostgreSQL, and Python to support visibility across operations, production, logistics, and financial workflows.
- Designed Power BI dashboards for machine performance, utilization, downtime, cutting output, labor efficiency, order profitability, gross margin signals, and material yield analysis.
- Shaped multi-source data from SQL Server, Excel-based logs, PostgreSQL, RFMS, Moraware, Slabsmith, Samsara, and other operational systems into analytics-ready structures for reporting.
- Worked directly from business questions and stakeholder requests, iterating reporting views until they were clear, actionable, and usable for day-to-day decision-making.
- Implemented validation checks, incremental refresh logic, deduplication, and performance-conscious data handling to keep reports reliable and efficient.
- Documented business logic, reporting assumptions, and workflow notes in English for distributed teams using the reporting stack.
- Supported Microsoft-oriented environments through Graph integrations and BI-adjacent workflows that fit enterprise reporting ecosystems.

Data Scientist, Data Analyst, and Financial Modeling Roles

2022 - 2023

Gringconstruc and Universidad San Francisco de Quito | Energy, construction, and public infrastructure projects

- Built analytical models and decision-support analyses for hydroelectric, photovoltaic, construction, and water-system projects.
- Performed forecasting, scenario analysis, and financial modeling tied to production, revenue, and feasibility decisions.
- Strengthened my ability to communicate findings clearly to business stakeholders and connect data analysis to measurable business outcomes.

SELECTED POWER BI AND ANALYTICS EVIDENCE

Operational KPI Reporting Layer

PORTFOLIO

Production reporting foundation combining SQL Server, Excel logs, and PostgreSQL into a trustworthy analytics layer for operational KPIs

Multi-Source Analytics Integration

PORTFOLIO

Integration workflows that restructure fabrication, CAD, installation, vendor, and operations activity into cleaner reporting-ready records

Power BI-Ready Data Preparation Patterns

PORTFOLIO

Public source bundle with sanitized Microsoft Graph, RFMS, Samsara, and spreadsheet-ingestion samples that demonstrate practical ETL and modeling foundations

> More project depth, code samples, and sanitized engineering bundles are available at **estebangarzon.com**. If you want to assess fit beyond this CV, that portfolio gives the clearest picture of how I build reporting layers, ETL pipelines, dashboards, and operational analytics systems.

TAILORED FOR: SENIOR POWER BI DEVELOPER AT SISKON SOFTWARE & AUTOMATION SRL | MARCH 2026

Role Match

Power BI dashboards · Advanced DAX · Power Query · Star-schema thinking · Cross-source ETL · Operational analytics · KPI reporting · RLS and governance · Performance optimization

Core Tools

Power BI · DAX · Power Query (M) · SQL · PostgreSQL · SQL Server · Python · pandas · Semantic model mindset · Data validation · RLS · REST APIs · Microsoft Graph · Documentation · Stakeholder training

Why This Fits

End-to-end Power BI focus

My strongest recent work sits at the reporting layer: shaping data, defining metrics, and building dashboards that leadership teams can use daily.

Multi-source modeling experience

I am used to collecting data from multiple operational systems, organizing it into reporting-ready structures, and translating business needs into usable analytics.

Governance and usability mindset

I care not only about building dashboards, but also about validation, documentation, stakeholder adoption, and the reliability of the reporting environment.

Education

Master's in Data Science and Business Intelligence
Universidad de las Americas | 2025 - 2026

Civil Engineering
Universidad San Francisco de Quito | 2018 - 2023

Languages

English: professional working proficiency

Spanish: native

Selected Courses

Foundations of Data Science | Google

Get Started with Python | Google
